Launch-ready overall

~1 wk

Coding work remaining

The launch date is set by the Admin paperwork (company → bank → VAT → Fygaro), not by the code. No trips run until card payment through Fygaro is live.

What is built and live

- **Website** (paradiseseaexpress.com) — routes, fares with VAT, booking that lands the customer on their own trip page.
- **Trip page** — trip status, the boat's live position, what's owed, messages to the office and to the captain, then rate and tip after the ride.
- **Dispatch board** — bookings, ask a captain, confirm, record payments and tips, clients, boats and availability, live fleet map, Friday payouts with commission and VAT. Sign-in has “Forgot password?”.
- **Captain web board** — runs, accept or decline, passengers aboard, finished, messages.
- **Passenger app** — book, payment screen, messages, rate and tip, multiple trips. Coded; not yet on phones.
- **Captain app** — runs, availability switch, GPS sharing, earnings, ratings, Junkanoo run alert. Coded; not yet on phones.
- **Backend** — VAT, commission, tips, ratings, payments ledger and security rules (hardened in the 28 Sep review). Telegram alert on every new booking.

Fixed in the 28 Sep review

- Website bookings on priced routes had been failing since August — fixed and tested live.
- Captains can no longer change commission, tips or payment, or see the passenger's private link, phone number or office notes.
- Fake bookings can't arrive looking paid; flood limit of 3 requests per number per 10 minutes.
- Payout “Mark paid” now pays exactly what it counted; unpaid money from earlier weeks carries forward.
- Ratings and tips visible on finished trips; charters quoted by the office; Nassau time everywhere.

What's left

#	Item	Owner	Time (if unblocked)
1	Incorporate → bank account → VAT registration → Fygaro merchant account (Pro plan — needed for signed payment links)	Admin	Outside coding control — sets the launch date
2	Connect Fygaro: signed payment links, payment confirmation, Pay and Tip buttons	Coding	½ day to build (can start now); 1 hour of real-card tests once the account exists

#	Item	Owner	Time (if unblocked)
3	Real fares, boats and captain logins from Shavane; clear test bookings	Admin + Coding	1–2 hours once the list arrives
4	Developer accounts as a company: Expo, Apple (\$99/yr), Google (\$25). Needs a D-U-N-S number, which needs the company	Admin	1–2 weeks of waiting after incorporation
5	App builds on real phones — push alerts, ringtone, GPS. Android test builds can start now, no store account needed	Coding	1 day
6	Switch on captain push alerts in the live database	Coding	15 minutes
7	Store listings: text, screenshots, permission wording; Apple review	Coding + stores	2–3 hours; review ~1–3 days
8	Email service (captain password resets, passenger receipts)	Admin picks, Coding sets up	30 minutes
9	Refunds (done in Fygaro, recorded here) and VAT receipts	Coding	2–3 hours
10	Timeout on unanswered captain offers	Coding	1 hour
11	Paid Supabase plan — backups, no pausing (~\$25/mo)	Admin	10 minutes
12	Polish: lock down dispatch page, security headers, 404 page, one dock list, website price cards from the database	Coding	2–3 hours
13	Privacy policy and terms pages (needed by app stores and Fygaro)	Coding drafts, Admin checks	1 hour to draft
14	Optional: captain GPS with the app closed	Coding	~1 day + store review risk

Shaded rows are the waiting that sets the launch date.

Time to launch

- **Coding work remaining:** about 3–4 working sessions — under a week — and most of it can be done now, before Fygaro exists.
- **What sets the date:** the waiting, not the code — item 1 (company → bank → VAT → Fygaro) and item 4 (store accounts need the company first). Launch is roughly the day Fygaro goes live plus one day.
- **Plan:** Admin starts the paperwork now and registers store accounts as a company the moment it exists (a new individual Google account must run a 14-day, 12-tester closed test first). Coding builds Fygaro, the offer timeout, receipts, polish and policy drafts now, and tests the Android app on a phone without a store account.

Next step

Admin: get Shavane's real fares, boats and captains — the one thing blocking realistic testing.
