

Paradise Sea Express

Project status · 5 October 2026 · updates the 28 September report

~95%

Software complete

~75%

Launch-ready overall

1–2

Coding sessions left (most waits on Admin)

The software is close to done. What sets the launch date is the Admin paperwork: company → bank → VAT → Fygaro, and the app store accounts that need the company to exist. No trips run until card payment is live.

Done since 28 September

- **Real fares — complete.** 126 fares live from the Admin sheets: every trip between the 17 stops has a fixed per-person price, before VAT, with its own round-trip price. Stops that are drop-off only (Pearl Island, Floating Bar, Blue Lagoon, Pigs Beach, Rose Island – Goodies) can be gone to but not picked up from.
- **Website:** only the 17 stops (plus “Other”); fares table and destination cards filled live from the price list; 404 page; security headers that keep a passenger's private trip link private.
- **Card payments (Fygaro):** built, tested and deployed — switched off until the account exists. Pay and Tip message the office until then.
- **Refunds and receipts:** the office records refunds; every paid trip gets a numbered, printable VAT receipt.
- **Captain offers** close after 15 minutes unanswered, with “Ask again” for the office.
- **Captain push alerts** are connected end to end (run offers and the captain's own messages only).
- **“Forgot password?”** on the dispatch and captain sign-in pages.
- **Drafts ready for Admin:** privacy policy, terms, app store listings (in the project's docs folder).

What's left

#	Item	Owner	Time
1	Incorporate → bank account → VAT registration → Fygaro merchant account (Pro plan — needed for signed payment links)	Admin	Outside coding control — sets the launch date
2	Switch on Fygaro: enter the account keys, one real \$1 test payment, refund it	Admin + Coding	1 hour once the account exists
3	Developer accounts as the company: Expo, Apple (\$99/yr, needs D-U-N-S), Google (\$25)	Admin	1–2 weeks of waiting after incorporation
4	Free Expo account — unlocks Android test builds on a phone now, no store account needed	Admin	2 minutes
5	App builds on real phones: push alerts, run alert sound, GPS, screenshots for the stores	Coding	1 day once item 4 is done
6	Store submission and Apple review	Coding + stores	2–3 hours; review ~1–3 days

#	Item	Owner	Time
7	Review the privacy policy and terms drafts, fill the [ADMIN] parts (cancellation and refund rules); then publish them on the site	Admin, then Coding	Admin's time; 30 min to publish
8	Hourly charters: decide rates per boat size, minimum hours, whole or half hours, how the boat is chosen	Admin	Answers only
9	Build hourly charter booking and pricing	Coding	2–3 hours once item 8 is answered
10	Email service (captain password resets, passenger receipts by email)	Admin picks, Coding sets up	30 minutes
11	Paid Supabase plan — backups, no pausing (~\$25/mo)	Admin	10 minutes
12	Lock the dispatch page behind a second sign-in check	Coding	1 hour
13	Housekeeping: cancel the TEST booking on dispatch; delete the old fares sheets from Drive	Admin	5 minutes
14	Optional: captain GPS that keeps working with the app closed	Coding	~1 day + store review risk

Shaded rows are the waiting that sets the launch date.

Time to launch

- **Coding left:** about 1–2 sessions — app builds, charters, publishing the policies, dispatch lock-down, Fygaro switch-on. Most of it waits on an Admin step first.
- **What sets the date:** items 1 and 3. Launch is roughly the day Fygaro goes live plus one day, if the store accounts were started as soon as the company existed.

Next steps

Admin: create the free Expo account (item 4) so the apps can be tested on a phone, keep the paperwork moving (item 1), and send the charter answers (item 8) when ready.
